RESEARCH INTERESTS

I am a Post-Doctoral Researcher interested in LGB(TQIA+) inequalities and the social and psychological processes driving minority stress and social exclusion at the intersection of demography and social stratification.

I earned my PhD in March 2026 with a dissertation on educational inequalities among LGB adolescents. Recently, I joined the SOLO project, studying the interrelations of living alone, loneliness, and social isolation in UK young adults.

The social relationship dynamics central to my previous work are also primary psychological mechanisms driving loneliness and social isolation across the life course, motivating my future research to investigate how gender, sexual orientation, and parental relationships intersect to produce inequalities across these dimensions.
